

VIRTUAL DEDICATED WEB SERVER CMS400 HOSTING

WSOL recommends **VIRTUAL DEDICATED SERVERS (VMs)** for clients that need direct access to the web server, but don't have the requirements typically associated with a dedicated server. If you are thinking of hosting several small to medium sized CMS400 sites or a couple of large implementations, VMs are the answer.

Profile

In the virtual environment, clients can:

- Run multiple sites
- Remotely access the server
- Install additional software
- Customize configurations
- Access IIS
- Add power (RAM, processor, disk space, etc. as needed)

Plans

\$399 setup, \$350 per month*

30 GB web space	Remote access
1 GB SQL disk space (Shared SQL)	100 GB monthly bandwidth
CMS400 Installed (client must provide license)	Microsoft Windows 2003

* - Setup includes configuration of one CMS400 site. Additional CMS400 site setups are \$199 per site and each additional database is \$25 per month. Advanced configuration services including load balancing, eSync and more are available at our normal hourly support rate.

Customize

Customize a plan by adding:

Additional Bandwidth	\$2 / GB per month (\$1 / GB per month when purchased in advance)
Additional Disk Space	\$5 / GB per month
Additional Email Accounts	\$2 / account per month
Additional SQL Database	\$25 per database per month (1 GB)
MyLittleAdmin for SQL	\$25 per month

Friends

VMs are the most popular kid on the block right now. They are quick to deploy, efficiently use hardware, and are extremely scalable. Some of WSOL's VM clients include:

Saint Anthony's Health Center

Forest District of DuPage County

Eisner LLP

N.O.B.C.
